Email title: A Survey on the Usefulness of Automatic Identification of Violation Symptoms in Code Reviews

Email content:
Dear XXX,

We are software engineering researchers from the University of XXX ([Nation]) and University of XXX ([Nation]). We are investigating whether (automatically-identified) architecture violations can be leveraged to help raise awareness on this matter among software developers and address architecture-related issues during maintenance and evolution.

Our trained models identify some code reviews (e.g., link, [#hyperlink]) that you were involved in Gerrit as discussions related to potential violation symptoms. We would be greatly appreciated if you can kindly complete a brief survey on this topic. The survey should take **5-10** minutes. You can find the background information and survey questions here: survey link.

This survey is **anonymous**. Please be assured that your survey responses will be kept **strictly confidential**, and we do not and will not keep any data about you. In addition, you will not be identified in any reports or publications in the future.

Thank you for your time. If you have any questions, please contact us. Please also contact us if you do not want to receive such emails in the future.

Kind Regards,

Author 1, University of XXX ([Nation])
